I need someone who can complete a very short-term task with a quick turnaround. I need help setting up my Airtable pages, ensuring that all Zaps and links are properly configured. I already have a template set up, but I need assistance putting everything together.

I'm a coach, and my clients apply for a 3-month coaching program. I need different tables set up for clients, coaches, weekly accountability groups, and applications. When someone applies, I want it to reflect their enrollment status. After reviewing applications, I need to either accept or reject them and send an email accordingly.

In the client table, I need to track the amount paid, the remaining balance, and when the program will end, etc.
